

Fork Positioner for Forklift

Forklift Fork Positioner - A fork positioner is actually a device made out of high quality materials designed to endure the most demanding procedures and work environments. This particular piece of equipment enables drivers to be able to operate the blades hydraulically without leaving the seat. Side shifting models have the extra ability to be able to laterally position the arms or the entire load so as to facilitate much more precise carrying and position in a faster and much more effective manner.

The unique fork pocket design can enable the individual operating it to securely swing the unit's blades without any worry of damaging the positioning cylinders. This could allow the worker the choice to either execute independent or simultaneous fork movement, depending on the requirements of the job. For most forklifts with non-OEM carriages, complete carriages are required. Standard OEM carriages can be converted into fork positioners on available units.
